

# Colorado's Decision Support Systems (CDSS) Overview

New Mexico water data meeting, April 28, 2020

Brian Macpherson, P.E. – DSS Specialist Colorado Water Conservation Board

## **CDSS History**

- CRDSS Feasibility Study 1992-1993 (Dames & Moore and CADSWES)
- Surface Water model was needed for planning
- Originally MODSIM (CSU) was chosen but abandoned
- BESTSM was adapted from Boyle Engineering 1985
  Model and turned into StateMod (Denver's PACSIM model also came out of this)
- Other software and data analysis tools developed to support StateMod
- Enhancements have typically come through Basin DSS efforts (CRDSS in 1993, RGDSS in 1998, SPDSS in 2001, ArkDSS in 2011)

## **Basin DSS Approach**

CDSS (Statewide)

CRDSS

Basin DSSs

RGDSS

SPDSS

ArkDSS

#### HydroBase

Diversion records

Water Rights transactions

Groundwater levels

Climate data

#### Software

StateMod

StateCU

**StateDMI** 

**TSTool** 

Map Viewer

**GIS Layers** 

Interviews/Task Memos

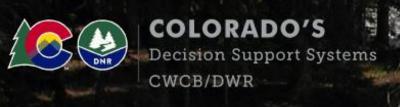

CU models

Surface water models

Groundwater models

Administration tools

\*Basin-specific issues\*

## **CDSS Program**

- Joint program between CWCB and Colorado DWR
  - CWCB is a planning agency, DWR is administration, (akin to ISC and OSE in NM?)
- ~2 staff from CWCB and ~8 staff from DWR-SEO comprise CDSS team
- ~120 water commissioners around Colorado gather data and administer rivers (~1/4 time data collection)
- Average of \$975,000 per year has been contracted from CWCB Projects Bill for CDSS since 2001
- Total ~\$3-5 million annually

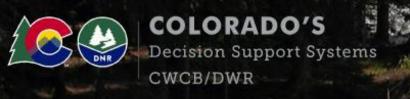

## **CDSS Tools available to the public:**

- HydroBase
- www.colorado.gov/cdss
- Online Data Tools
- GIS / Map Viewer
- Crop Consumptive Use Modeling (StateCU) Datasets
- Water Allocation Modeling (StateMod) Datasets
- Supporting software (TSTool, StateDMI, StateDGI, Lease Fallow Tool, etc.)

#### Other items:

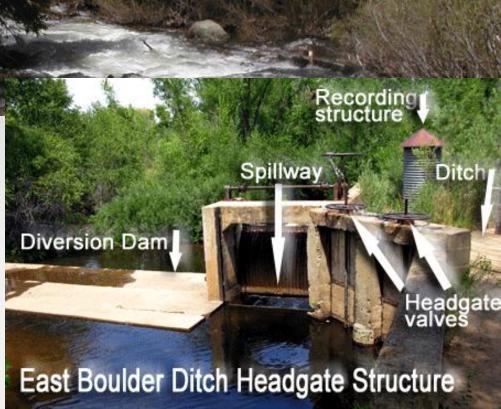

- Model documentation, Studies, and Reports (CWCB planning)
- Colors of Water Tool
- Groundwater models

# **Types of Data in HydroBase**

- Diversions
- Well Metering
- Streamflow
- Reservoir Stage and Releases
- Water Rights
- Call Chronology
- Aquifer Levels
- GIS

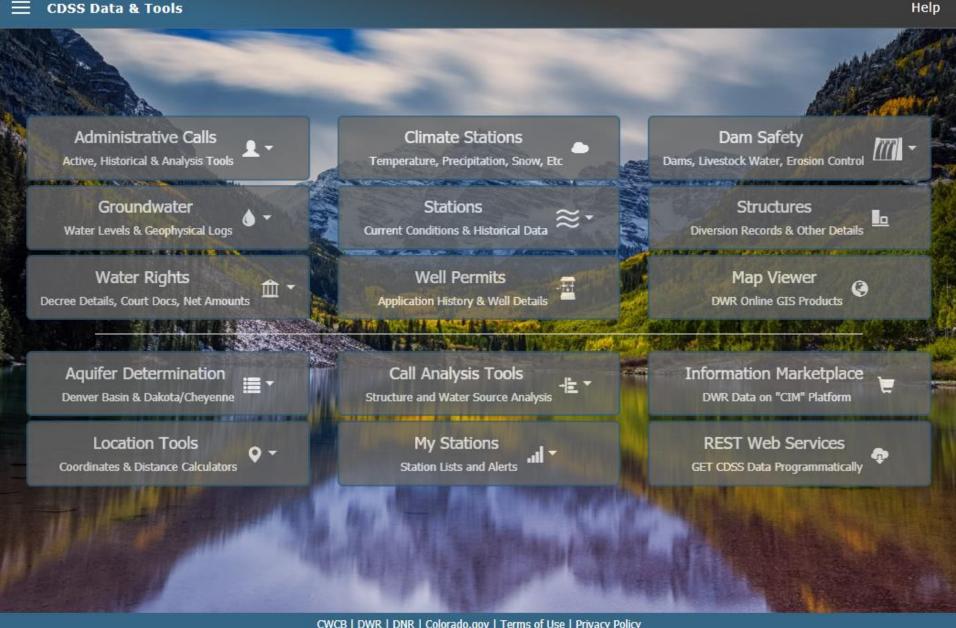

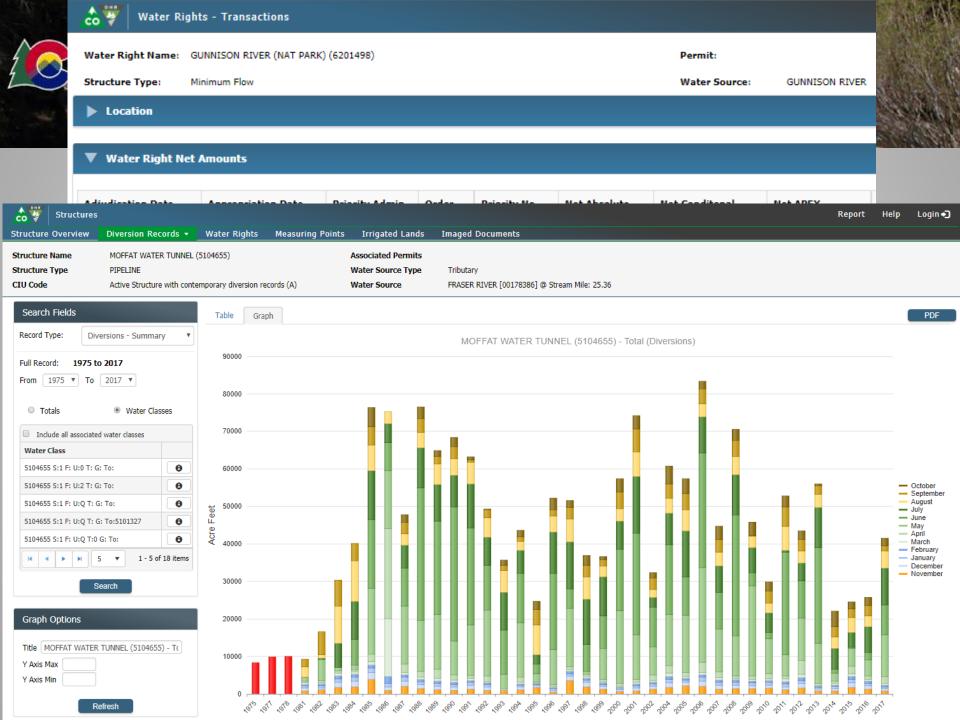

### **Online Data Tools**

## https://dwr.state.co.us/Tools

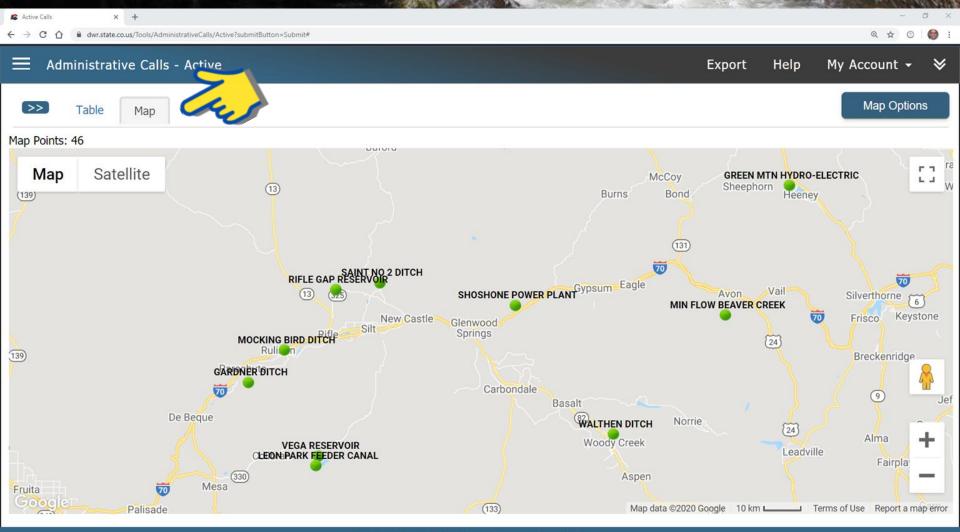

- Query and visualization of HydroBase
- Call Analysis Tool
- Aquifer Determination Tool
- My Stations / Alerts
- Colors of Water
- REST Web services

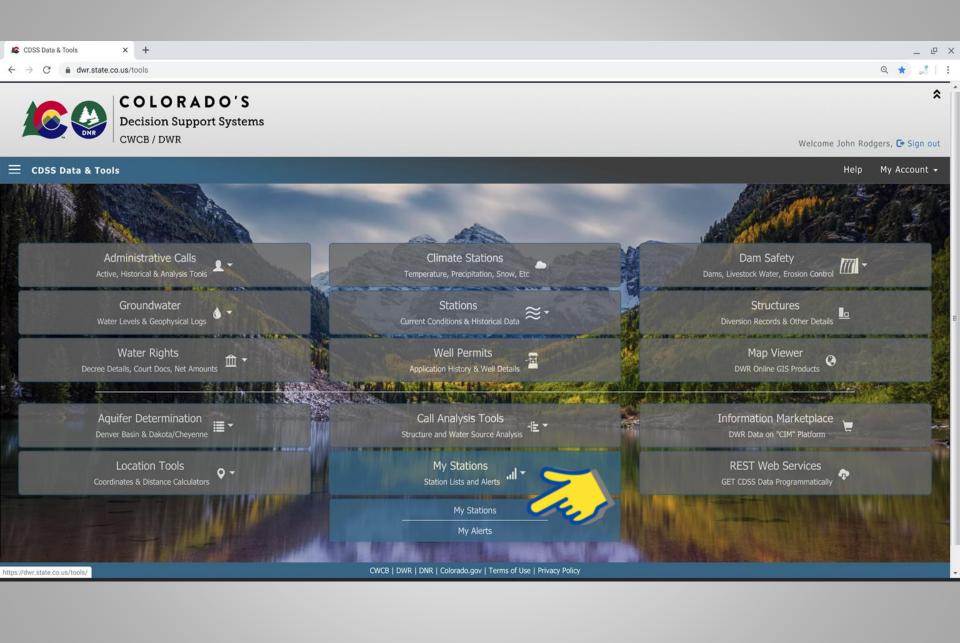

CWCB | DWR | DNR | Colorado.gov | Terms of Use | Privacy Policy

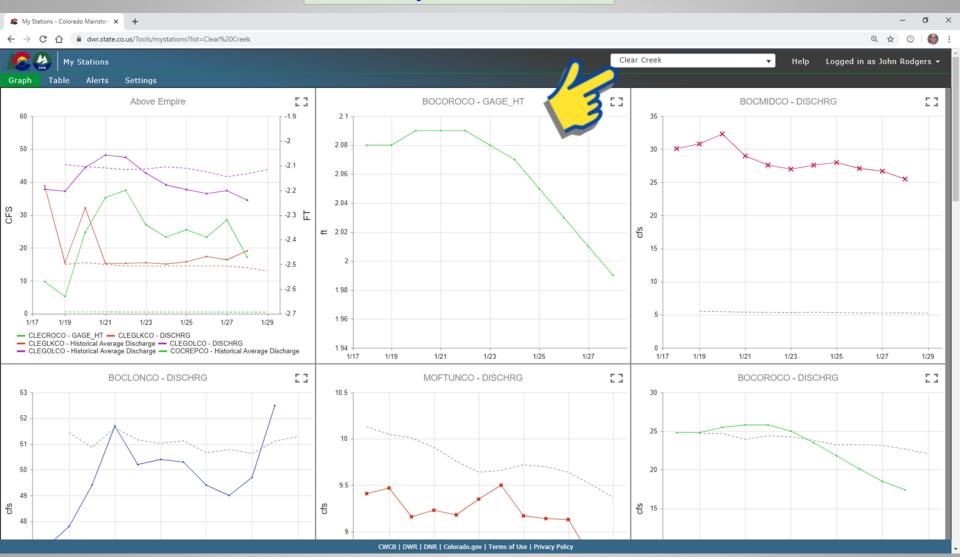

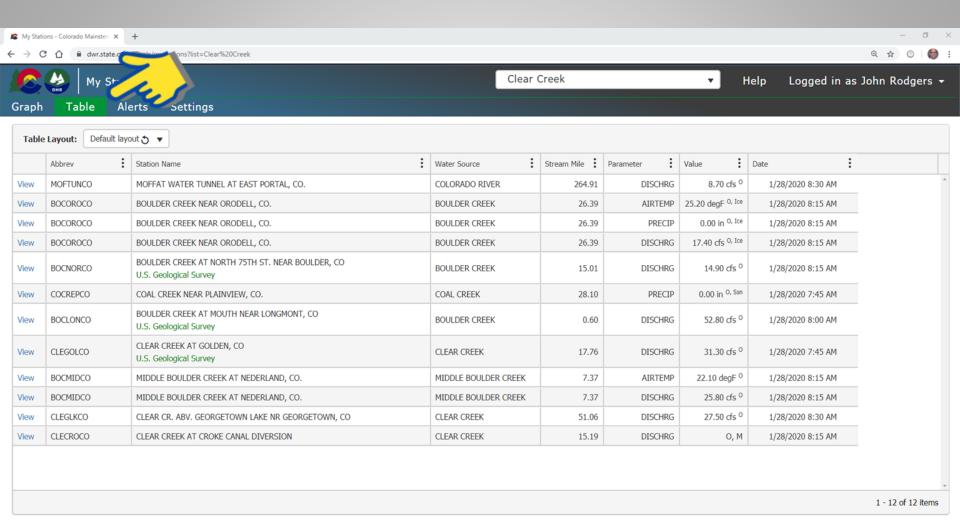

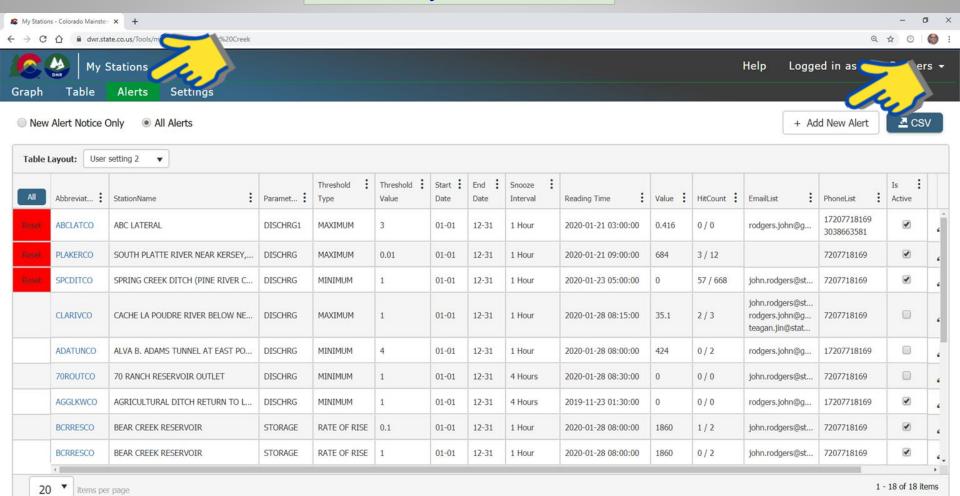

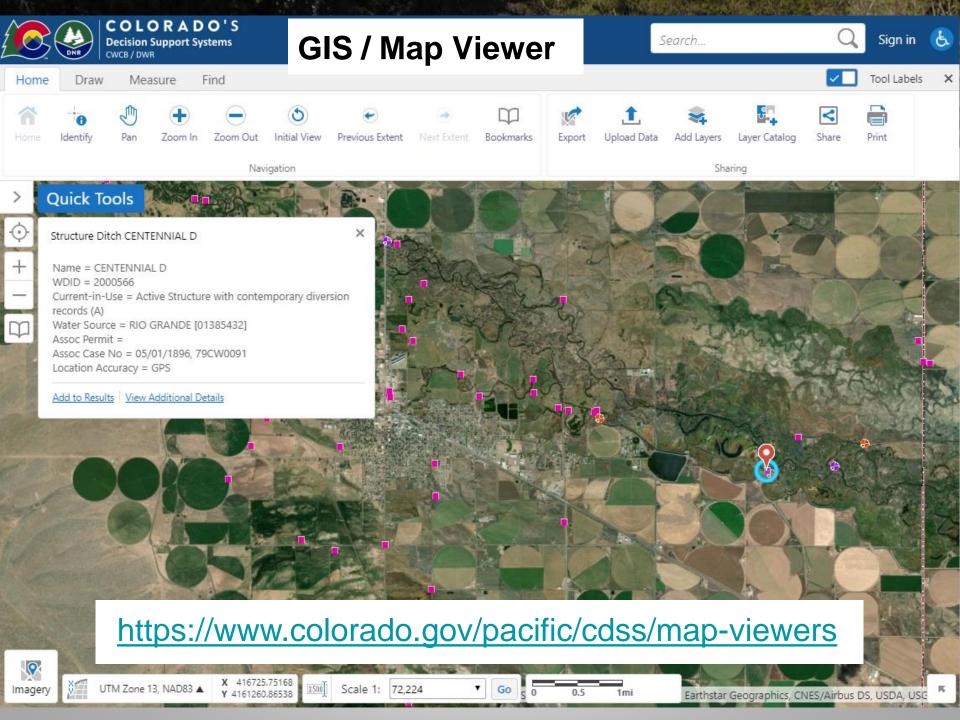

## My Stations

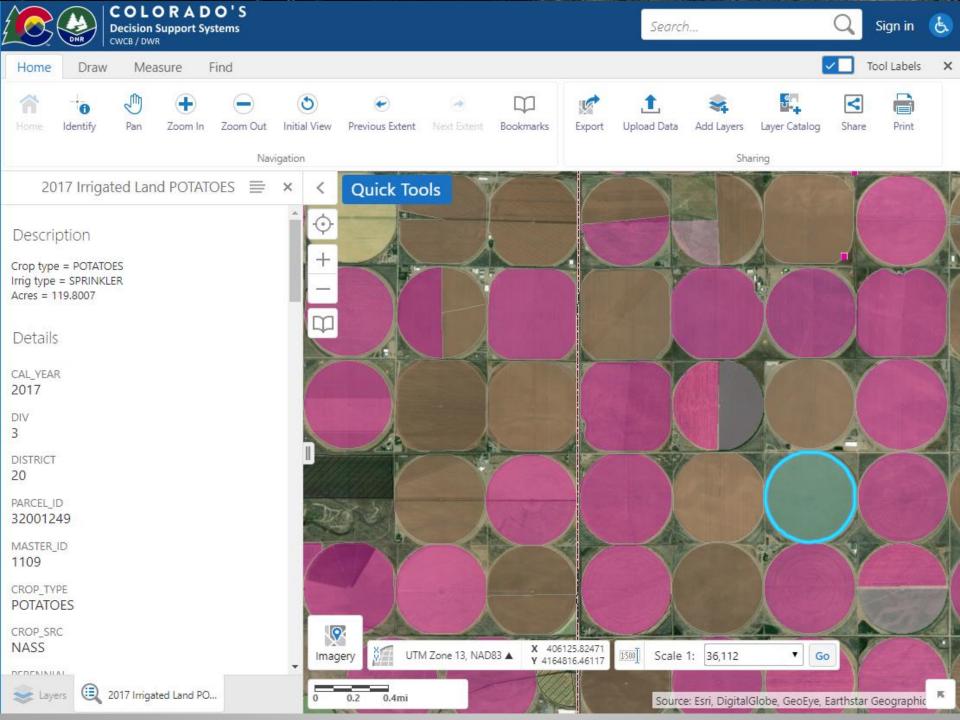

#### My Alerts

## StateCU (CU Modeling)

- Consumptive Use modeling software produced by Colorado
- Monthly Modified Blaney-Criddle or Daily Penman-Monteith

#### Inputs:

- GIS coverage of acreage, crop type, irrigation type, and structure association
- Climate data

#### Outputs:

- Potential consumptive use
- Supply-limited consumptive use
- Unlagged return flow
- Effective Precipitation

## **StateMod (Water Allocation Modeling)**

- Water allocation modeling software produced by Colorado
- Prior appropriation and Colorado operations (Compacts, augmentation, etc.)

### Inputs:

- Crop/municipal/industrial demands
- Water Rights
- Natural Flows

#### Outputs:

- Streamflow
- Diversions
- Well pumping

### Other items:

Model documentation, Studies, and Reports:

https://www.colorado.gov/pacific/cdss/documents-and-resources

Colors of Water: <a href="http://div2waterops.com/ColorsOfWater">http://div2waterops.com/ColorsOfWater</a>

Groundwater modeling:

https://www.colorado.gov/pacific/cdss/groundwater-modflow

## **Questions?**
